Note:

- Select one answer for each question.

Questions & answers

- 1. Which clause is used to sort the result by one or more columns?
 - A. HAVING
 - B. FROM
 - C. ORDER BY
 - D. WHERE
- 2. The LIKE SQL keyword is used along with?
 - A. WHERE clause
 - B. ORDER BY clause
 - C. JOIN clause
 - D. GROUP BY clause
- 3. With SQL, how can you insert a new record into the "Persons" table?
 - A. INSERT VALUES ('Jimmy', 'Jackson') INTO Persons.
 - B. INSERT ('Jimmy', 'Jackson') INTO Persons
 - C. INSERT INTO Persons VALUES ('Jimmy', 'Jackson')

4. Which SQL gain table B from table A?

Table A Table B

Employee ID	Name	Department Code	Salary	Department Code	Employee ID	Name
10010	Lucy Brown	101	2,000	101	10010	Lucy Brown
10020	M. Gordon	201	3,000	101	10030	W. Smith
10030	W. Smith	101	2,500	102	10040	John Benton
10040	John Benton	102	3,500	102	10050	Tome Cage
10050	Tom Cage	102	3,000	201	10020	M. Gordon
10060	Mary Carpenter	201	2,500	201	10060	Mary Carpenter

A. SELECT department_code, employee_ID, name FROM A GROUP BY employee_ID;

GROUP BY department_code; C. SELECT department_code, employee_ID, name FROM ASoftware Developer Entry Test Page 2 of 9 ORDER BY employee_ID; D. SELECT department_code, employee_ID, name FROM A ORDER BY department_code. 5. How many tables may be included with a join? A. One. B. Two. C. Three. D. All of the mentioned options. 6. A function returns one value and has only output parameters? A. TRUE B. FALSE 7. Which of the following conditions has to be satisfied for INNER JOIN to work? A. Columns used for joining must have same name. B. Columns used for joining must have different names. D. Columns used for joining must have different names. B. The clause that filters JOIN results is called? A. WHERE. B. SORT C. GROUP D. GROUP BY 9. How can you change "Hansen" into "Nilsen" in the "LastName" column in the Persons table? A. UPDATE Persons SET LastName="Nilsen" WHERE LastName="Hansen" C. MODIFY Persons SET LastName="Nilsen" WHERE LastName="Hansen" C. MODIFY Persons SET LastName="Nilsen" WHERE LastName="Hansen"		SELECT department_code, employee_ID, name FROM A					
C. SELECT department_code, employee_ID, name FROM ASoftware Developer Entry Test Page 2 of 9 ORDER BY employee_ID; D. SELECT department_code, employee_ID, name FROM A ORDER BY department_code. 5. How many tables may be included with a join? A. One. B. Two. C. Three. D. All of the mentioned options. 6. A function returns one value and has only output parameters? A. TRUE B. FALSE 7. Which of the following conditions has to be satisfied for INNER JOIN to work? A. Columns used for joining must have same name. B. Columns used for joining must have same or different name. C. Columns used for joining must have different names. D. Columns used for joining must have different names. 8. The clause that filters JOIN results is called? A. WHERE. B. SORT C. GROUP D. GROUP BY 9. How can you change "Hansen" into "Nilsen" in the "LastName" column in the Persons table? A. UPDATE Persons SET LastName="Hansen' INTO LastName="Nilsen' B. UPDATE Persons SET LastName="Nilsen' WHERE LastName="Hansen'							
FROM ASoftware Developer Entry Test Page 2 of 9 ORDER BY employee_ID; D. SELECT department_code, employee_ID, name FROM A ORDER BY department_code. 5. How many tables may be included with a join? A. One. B. Two. C. Three. D. All of the mentioned options. 6. A function returns one value and has only output parameters? A. TRUE B. FALSE 7. Which of the following conditions has to be satisfied for INNER JOIN to work? A. Columns used for joining must have same name. B. Columns used for joining can have same or different name. C. Columns used for joining must have different names. D. Columns used for joining must have different names. 8. The clause that filters JOIN results is called? A. WHERE. B. SORT C. GROUP D. GROUP BY 9. How can you change "Hansen" into "Nilsen" in the "LastName" column in the Persons table? A. UPDATE Persons SET LastName='Hansen' INTO LastName='Nilsen' B. UPDATE Persons SET LastName='Hansen' WHERE LastName='Hansen'		cite of B1 department_code,					
ORDER BY employee_ID; D. SELECT department_code, employee_ID, name FROM A ORDER BY department_code. 5. How many tables may be included with a join? A. One. B. Two. C. Three. D. All of the mentioned options. 6. A function returns one value and has only output parameters? A. TRUE B. FALSE 7. Which of the following conditions has to be satisfied for INNER JOIN to work? A. Columns used for joining must have same name. B. Columns used for joining can have same or different name. C. Columns used for joining must have different names. D. Columns used for joining must have different names. 8. The clause that filters JOIN results is called? A. WHERE. B. SORT C. GROUP D. GROUP BY 9. How can you change "Hansen" into "Nilsen" in the "LastName" column in the Persons table? A. UPDATE Persons SET LastName='Hansen' INTO LastName='Nilsen' B. UPDATE Persons SET LastName='Hansen' WHERE LastName='Hansen'	C.	SELECT department_code, employee_ID, name					
D. SELECT department_code, employee_ID, name FROM A ORDER BY department_code. 5. How many tables may be included with a join? A. One. B. Two. C. Three. D. All of the mentioned options. 6. A function returns one value and has only output parameters? A. TRUE B. FALSE 7. Which of the following conditions has to be satisfied for INNER JOIN to work? A. Columns used for joining must have same name. B. Columns used for joining can have same or different name. C. Columns used for joining must have different names. D. Columns used for joining must have different names. 8. The clause that filters JOIN results is called? A. WHERE. B. SORT C. GROUP D. GROUP BY 9. How can you change "Hansen" into "Nilsen" in the "LastName" column in the Persons table? A. UPDATE Persons SET LastName='Hansen' INTO LastName='Nilsen' B. UPDATE Persons SET LastName='Nilsen' WHERE LastName='Hansen'		FROM ASoftware Developer Entry Test Page 2 of 9					
FROM A ORDER BY department_code. 5. How many tables may be included with a join? A. One. B. Two. C. Three. D. All of the mentioned options. 6. A function returns one value and has only output parameters? A. TRUE B. FALSE 7. Which of the following conditions has to be satisfied for INNER JOIN to work? A. Columns used for joining must have same name. B. Columns used for joining can have same or different name. C. Columns used for joining must have different names. D. Columns used for joining must have different names. 8. The clause that filters JOIN results is called? A. WHERE. B. SORT C. GROUP D. GROUP BY 9. How can you change "Hansen" into "Nilsen" in the "LastName" column in the Persons table? A. UPDATE Persons SET LastName="Hansen' INTO LastName="Nilsen' B. UPDATE Persons SET LastName="Nilsen' WHERE LastName="Hansen'		ORDER BY employee_ID;					
FROM A ORDER BY department_code. 5. How many tables may be included with a join? A. One. B. Two. C. Three. D. All of the mentioned options. 6. A function returns one value and has only output parameters? A. TRUE B. FALSE 7. Which of the following conditions has to be satisfied for INNER JOIN to work? A. Columns used for joining must have same name. B. Columns used for joining can have same or different name. C. Columns used for joining must have different names. D. Columns used for joining must have different names. 8. The clause that filters JOIN results is called? A. WHERE. B. SORT C. GROUP D. GROUP BY 9. How can you change "Hansen" into "Nilsen" in the "LastName" column in the Persons table? A. UPDATE Persons SET LastName="Hansen' INTO LastName="Nilsen' B. UPDATE Persons SET LastName="Nilsen' WHERE LastName="Hansen'	D	SELECT department, code, employee ID, name					
ORDER BY department_code. 5. How many tables may be included with a join? A. One. B. Two. C. Three. D. All of the mentioned options. 6. A function returns one value and has only output parameters? A. TRUE B. FALSE 7. Which of the following conditions has to be satisfied for INNER JOIN to work? A. Columns used for joining must have same name. B. Columns used for joining must have different names. C. Columns used for joining must have different names. D. Columns used for joining must have different names. 8. The clause that filters JOIN results is called? A. WHERE. B. SORT C. GROUP D. GROUP BY 9. How can you change "Hansen" into "Nilsen" in the "LastName" column in the Persons table? A. UPDATE Persons SET LastName="Hansen' INTO LastName="Nilsen' B. UPDATE Persons SET LastName="Nilsen' WHERE LastName="Hansen'							
A. One. B. Two. C. Three. D. All of the mentioned options. 6. A function returns one value and has only output parameters? A. TRUE B. FALSE 7. Which of the following conditions has to be satisfied for INNER JOIN to work? A. Columns used for joining must have same name. B. Columns used for joining can have same or different name. C. Columns used for joining must have different names. D. Columns used for joining must have different names. 8. The clause that filters JOIN results is called? A. WHERE. B. SORT C. GROUP D. GROUP BY 9. How can you change "Hansen" into "Nilsen" in the "LastName" column in the Persons table? A. UPDATE Persons SET LastName="Hansen' INTO LastName="Nilsen' B. UPDATE Persons SET LastName="Nilsen' WHERE LastName="Hansen'							
A. One. B. Two. C. Three. D. All of the mentioned options. 6. A function returns one value and has only output parameters? A. TRUE B. FALSE 7. Which of the following conditions has to be satisfied for INNER JOIN to work? A. Columns used for joining must have same name. B. Columns used for joining can have same or different name. C. Columns used for joining must have different names. D. Columns used for joining must have different names. 8. The clause that filters JOIN results is called? A. WHERE. B. SORT C. GROUP D. GROUP BY 9. How can you change "Hansen" into "Nilsen" in the "LastName" column in the Persons table? A. UPDATE Persons SET LastName="Hansen' INTO LastName="Nilsen' B. UPDATE Persons SET LastName="Nilsen' WHERE LastName="Hansen'	5 II						
B. Two. C. Three. D. All of the mentioned options. 6. A function returns one value and has only output parameters? A. TRUE B. FALSE 7. Which of the following conditions has to be satisfied for INNER JOIN to work? A. Columns used for joining must have same name. B. Columns used for joining can have same or different name. C. Columns used for joining must have different names. D. Columns used for joining must have different names. 8. The clause that filters JOIN results is called? A. WHERE. B. SORT C. GROUP D. GROUP BY 9. How can you change "Hansen" into "Nilsen" in the "LastName" column in the Persons table? A. UPDATE Persons SET LastName="Hansen' INTO LastName="Nilsen' B. UPDATE Persons SET LastName="Nilsen' WHERE LastName="Hansen'	5. How	many tables may be included with a join:					
C. Three. D. All of the mentioned options. 6. A function returns one value and has only output parameters? A. TRUE B. FALSE 7. Which of the following conditions has to be satisfied for INNER JOIN to work? A. Columns used for joining must have same name. B. Columns used for joining can have same or different name. C. Columns used for joining must have different names. D. Columns used for joining must have different names. 8. The clause that filters JOIN results is called? A. WHERE. B. SORT C. GROUP D. GROUP BY 9. How can you change "Hansen" into "Nilsen" in the "LastName" column in the Persons table? A. UPDATE Persons SET LastName="Hansen' INTO LastName="Nilsen' B. UPDATE Persons SET LastName="Nilsen' WHERE LastName="Hansen'							
D. All of the mentioned options. 6. A function returns one value and has only output parameters? A. TRUE B. FALSE 7. Which of the following conditions has to be satisfied for INNER JOIN to work? A. Columns used for joining must have same name. B. Columns used for joining can have same or different name. C. Columns used for joining must have different names. D. Columns used for joining must have different names. 8. The clause that filters JOIN results is called? A. WHERE. B. SORT C. GROUP D. GROUP BY 9. How can you change "Hansen" into "Nilsen" in the "LastName" column in the Persons table? A. UPDATE Persons SET LastName='Hansen' INTO LastName='Nilsen' B. UPDATE Persons SET LastName='Nilsen' WHERE LastName='Hansen'							
6. A function returns one value and has only output parameters? A. TRUE B. FALSE 7. Which of the following conditions has to be satisfied for INNER JOIN to work? A. Columns used for joining must have same name. B. Columns used for joining can have same or different name. C. Columns used for joining must have different names. D. Columns used for joining must have different names. 8. The clause that filters JOIN results is called? A. WHERE. B. SORT C. GROUP D. GROUP BY 9. How can you change "Hansen" into "Nilsen" in the "LastName" column in the Persons table? A. UPDATE Persons SET LastName='Hansen' INTO LastName='Nilsen' B. UPDATE Persons SET LastName='Nilsen' WHERE LastName='Hansen'							
A. TRUE B. FALSE 7. Which of the following conditions has to be satisfied for INNER JOIN to work? A. Columns used for joining must have same name. B. Columns used for joining can have same or different name. C. Columns used for joining must have different names. D. Columns used for joining must have different names. 8. The clause that filters JOIN results is called? A. WHERE. B. SORT C. GROUP D. GROUP BY 9. How can you change "Hansen" into "Nilsen" in the "LastName" column in the Persons table? A. UPDATE Persons SET LastName='Hansen' INTO LastName='Nilsen' B. UPDATE Persons SET LastName='Nilsen' WHERE LastName='Hansen'	D.	All of the mentioned options.					
7. Which of the following conditions has to be satisfied for INNER JOIN to work? A. Columns used for joining must have same name. B. Columns used for joining can have same or different name. C. Columns used for joining must have different names. D. Columns used for joining must have different names. 8. The clause that filters JOIN results is called? A. WHERE. B. SORT C. GROUP D. GROUP BY 9. How can you change "Hansen" into "Nilsen" in the "LastName" column in the Persons table? A. UPDATE Persons SET LastName='Hansen' INTO LastName='Nilsen' B. UPDATE Persons SET LastName='Nilsen' WHERE LastName='Hansen'	6. A fu	nction returns one value and has only output parameters?					
7. Which of the following conditions has to be satisfied for INNER JOIN to work? A. Columns used for joining must have same name. B. Columns used for joining can have same or different name. C. Columns used for joining must have different names. D. Columns used for joining must have different names. 8. The clause that filters JOIN results is called? A. WHERE. B. SORT C. GROUP D. GROUP BY 9. How can you change "Hansen" into "Nilsen" in the "LastName" column in the Persons table? A. UPDATE Persons SET LastName='Hansen' INTO LastName='Nilsen' B. UPDATE Persons SET LastName='Nilsen' WHERE LastName='Hansen'	A.	TRUE					
A. Columns used for joining must have same name. B. Columns used for joining can have same or different name. C. Columns used for joining must have different names. D. Columns used for joining must have different names. 8. The clause that filters JOIN results is called? A. WHERE. B. SORT C. GROUP D. GROUP BY 9. How can you change "Hansen" into "Nilsen" in the "LastName" column in the Persons table? A. UPDATE Persons SET LastName='Hansen' INTO LastName='Nilsen' B. UPDATE Persons SET LastName='Nilsen' WHERE LastName='Hansen'	B.	FALSE					
B. Columns used for joining can have same or different name. C. Columns used for joining must have different names. D. Columns used for joining must have different names. 8. The clause that filters JOIN results is called? A. WHERE. B. SORT C. GROUP D. GROUP BY 9. How can you change "Hansen" into "Nilsen" in the "LastName" column in the Persons table? A. UPDATE Persons SET LastName='Hansen' INTO LastName='Nilsen' B. UPDATE Persons SET LastName='Nilsen' WHERE LastName='Hansen'	7. Whi	ch of the following conditions has to be satisfied for INNER JOIN to work?					
B. Columns used for joining can have same or different name. C. Columns used for joining must have different names. D. Columns used for joining must have different names. 8. The clause that filters JOIN results is called? A. WHERE. B. SORT C. GROUP D. GROUP BY 9. How can you change "Hansen" into "Nilsen" in the "LastName" column in the Persons table? A. UPDATE Persons SET LastName='Hansen' INTO LastName='Nilsen' B. UPDATE Persons SET LastName='Nilsen' WHERE LastName='Hansen'	A.	Columns used for joining must have same name.					
C. Columns used for joining must have different names. D. Columns used for joining must have different names. 8. The clause that filters JOIN results is called? A. WHERE. B. SORT C. GROUP D. GROUP BY 9. How can you change "Hansen" into "Nilsen" in the "LastName" column in the Persons table? A. UPDATE Persons SET LastName='Hansen' INTO LastName='Nilsen' B. UPDATE Persons SET LastName='Nilsen' WHERE LastName='Hansen'		·					
8. The clause that filters JOIN results is called? A. WHERE. B. SORT C. GROUP D. GROUP BY 9. How can you change "Hansen" into "Nilsen" in the "LastName" column in the Persons table? A. UPDATE Persons SET LastName='Hansen' INTO LastName='Nilsen' B. UPDATE Persons SET LastName='Nilsen' WHERE LastName='Hansen'							
A. WHERE. B. SORT C. GROUP D. GROUP BY 9. How can you change "Hansen" into "Nilsen" in the "LastName" column in the Persons table? A. UPDATE Persons SET LastName='Hansen' INTO LastName='Nilsen' B. UPDATE Persons SET LastName='Nilsen' WHERE LastName='Hansen'	D.	Columns used for joining must have different names.					
B. SORT C. GROUP D. GROUP BY 9. How can you change "Hansen" into "Nilsen" in the "LastName" column in the Persons table? A. UPDATE Persons SET LastName='Hansen' INTO LastName='Nilsen' B. UPDATE Persons SET LastName='Nilsen' WHERE LastName='Hansen'	8. The	clause that filters JOIN results is called?					
C. GROUP D. GROUP BY 9. How can you change "Hansen" into "Nilsen" in the "LastName" column in the Persons table? A. UPDATE Persons SET LastName='Hansen' INTO LastName='Nilsen' B. UPDATE Persons SET LastName='Nilsen' WHERE LastName='Hansen'	A.	WHERE.					
 D. GROUP BY 9. How can you change "Hansen" into "Nilsen" in the "LastName" column in the Persons table? A. UPDATE Persons SET LastName='Hansen' INTO LastName='Nilsen' B. UPDATE Persons SET LastName='Nilsen' WHERE LastName='Hansen' 	В.	SORT					
9. How can you change "Hansen" into "Nilsen" in the "LastName" column in the Persons table? A. UPDATE Persons SET LastName='Hansen' INTO LastName='Nilsen' B. UPDATE Persons SET LastName='Nilsen' WHERE LastName='Hansen'	C.	GROUP					
Persons table? A. UPDATE Persons SET LastName='Hansen' INTO LastName='Nilsen' B. UPDATE Persons SET LastName='Nilsen' WHERE LastName='Hansen'	D.	GROUP BY					
A. UPDATE Persons SET LastName='Hansen' INTO LastName='Nilsen' B. UPDATE Persons SET LastName='Nilsen' WHERE LastName='Hansen'	9. How	can you change "Hansen" into "Nilsen" in the "LastName" column in the					
B. UPDATE Persons SET LastName='Nilsen' WHERE LastName='Hansen'	Person	as table?					
B. UPDATE Persons SET LastName='Nilsen' WHERE LastName='Hansen'	A.	UPDATE Persons SET LastName='Hansen' INTO LastName='Nilsen'					
C. MODIFY Persons SET LastName='Nilsen' WHERE LastName='Hansen'							
	C.	MODIFY Persons SET LastName='Nilsen' WHERE LastName='Hansen'					

- D. MODIFY Persons SET LastName='Hansen' INTO LastName='Nilsen'
- 10. There is a table including the data items shown below. Which of the following SQL statements can insert a new row in the "student" table?

Name	Null?	Туре
STUD_ID	NOT NULL	NUMBER(3)
NAME	NOT NULL	VARCHAR2(25)
ADDRESS		VARCHAR2(50)
GRADUATION		DATE

- A. INSERT INTO student (stud_id, address, graduation) VALUES (101, 'Dave', '100 Happy Lane', '2001-06-14');
- B. INSERT INTO student (stud_id, address, name, graduation) VALUES (101, '100 Happy Lane', 'Dave', '2001-06-14');
- C. INSERT INTO student VALUES (101, '100 Happy Lane', '2001-06-14', 'Dave');
- D. INSERT INTO student VALUES (101, '2001-06-14', '100 Happy Lane', 'Dave');
- 11. Which clause is used to filter groups?
 - A. HAVING
 - B. FROM
 - C. WHERE
 - D. SELECT
- 12. Which is TRIGGER in Mysql?
 - A. Before Insert
 - B. After Delete
 - C. All
 - D. Before Update
- 13. What is abc in the following MySQL statement?

CREATE VIEW xyz (abc) AS SELECT a FROM t; A. row name B. column name C. view D. database 14. What key is used to link two tables in Mysql? A. Primary key B. Foreign key C. Primary and foreign key D. None of the above 15. Views are not updatable? A. True B. False 16. Which of these return a result to the client? A. Stored functions B. Stored procedures C. Triggers D. Events 17. Which of these is defined to execute when the table is modified only? A. Stored functions. B. Stored procedures. C. Triggers. D. Events. 18. The AUTO_INCREMENT column attribute is best used with which type? A. FLOAT B. INT C. CHARACTER D. DOUBLE 19. How many rows are included in the table gained as as result of execution of the following statement? SELECT DISTINCT customer_name, merchandise_name, unit_price

FROM order_table, merchandise_table

 $WHERE\ order_table.merchandise_number = merchandise_table.mnrchandise_number;$

order_table

$merchandise_table$

		1			
customer_name	merchandis e_number		merchandis e_number	merchandise_na me	unit_price
OyamaShoten	TV28		TV28	28-inch television	250,000
OyamaShoten	TV28W		TV28W	28-inch television	250,000
OyamaShoten	TV32		TV32	32-inch television	300,000
Oyama Shokai	TV32		TV32W	32-inch television	300,000
Oyama Shokai	TV32W				

٨	2
Α.	- 7.

B. 3.

C. 4.

D. 5.

20. How many values can be returned from a given stored function?

Α	0
4 A.	\mathbf{o}

B. 1

C. 2

D. 3

21. How many values can be returned from a stored procedure?

- A. 0
- B. 1
- C. 2
- D. 3

22. Which procedure parameter enables the caller to pass in a value and get back a value?

- A. IN
- B. OUT
- C. IN OUT

D. GETINOUT

23. Which of the following SQL statements can extract employee name's whose salary is

\$10000 or higher from the table "human resource"?

A. SELECT salary

FROM human_resourceSoftware Developer Entry Test Page 6 of 9

WHERE employee_name >=10000

GROUP BY salary

B. SELECT employee_name, COUNT(*)

FROM human_resource

WHERE salary>=10000

GROUP BY employee_name

C. SELECT employee_name, salary

FROM human_resource

GROUP BY salary

HAVING COUNT(*)>=10000.

D. SELECT employee_name

FROM human_resource

WHERE salary>=10000.

24. For which of the following are triggers not supported?

- A. delete
- B. update
- C. insert
- D. views

25. Which statement is used to remove a trigger?

- A. REMOVE
- B. DELETE
- C. DROP
- D. CLEAR

26. In inner join, result is produced by matching rows in one table with rows in another table?

- A. True
- B. False

27. Which Numeric Data type has the largest range?

- A. Mediumint
- B. Smallint
- C. Int

- D. Tinyint
- 28. You have a table named Employees. You want to identify the supervisor to which each employee reports. You write the following query.

SELECT e.EmloyeeName AS [EmployeeName], s.EmployeeName AS [SuperVisorName]
FROM Employees e

You need to ensure that the query returns a list of all employees and their respective supervisor. Which join clause should you use to complete the query?

- A. RIGHT JOIN Employees s ON e.ReportsTo = s.EmployeeId.
- B. LEFT JOIN Employees s ON e.ReportsTo = s.EmployeeId.
- C. INNER JOIN Employees s ON e.EmployeeId = s.EmployeeId.
- 29. What is the default format for "Datetime" data type?
 - A. YYYY-MM-DD HH:MI:SS
 - B. MM-YYYY-DD HH:MI:SS
 - C. DD-YYYY-MM MI:HH:SS
 - D. None of the mentioned
- 30. Your database contains two tables named DomesticSalesOrders and

InternationalSalesOrders. Both tables contain more than 100 million rows. Each table has a Primary Key column named SalesOrderId. The data in the two tables is distinct from one another. Business users want a report that includes aggregate information about the total number of global sales and total sales amounts. You need to ensure that your query executes in the minimum possible time. Which query should you use?

- A. SELECT COUNT(*) AS NumberOfSales, SUM(SalesAmount) AS TotalSalesAmount FROM (
 SELECT SalesOrderId, SalesAmount
 FROM DomesticSalesOrders
 UNION ALL
 SELECT SalesOrderId, SalesAmount
 FROM InternationalSalesOrders
) AS p;
- B. SELECT COUNT(*) AS NumberOfSales, SUM(SalesAmount) AS TotalSalesAmount FROM (

SELECT SalesOrderId, SalesAmount

FROM DomesticSalesOrders

UNION

SELECT SalesOrderId, SalesAmountSoftware Developer Entry Test Page 7 of 9

FROM InternationalSalesOrders

) AS p;

C. SELECT COUNT(*) AS NumberOfSales, SUM(SalesAmount) AS TotalSalesAmount FROM DomesticSalesOrders

UNION

SELECT COUNT(*) AS NumberOfSales, SUM(SalesAmount) AS TotalSalesAmount FROM InternationalSalesOrders;

D. SELECT COUNT(*) AS NumberOfSales, SUM(SalesAmount) AS TotalSalesAmount FROM DomesticSalesOrders

UNION ALL

SELECT COUNT(*) AS NumberOfSales, SUM(SalesAmount) AS TotalSalesAmount FROM InternationalSalesOrders;
